2. Available in a variety of frame colors, custom aspect ratios, and sizes up to 60"x120"
3. Stylish 1/4" beveled frame creates a sleek, edgeless appearance

Sabre™

High performance screens for modern architectural and design applications

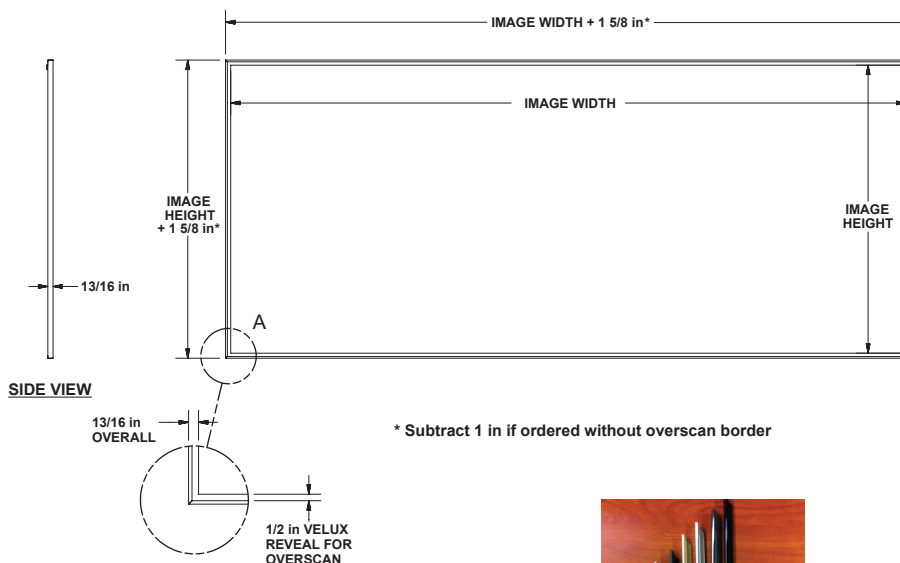

Developed to meet the demands of the most sophisticated architectural applications, Sabre fixed frame front projection screen systems come standard in most popular architectural finishes, with custom finishes available upon request. The high-performance Stewart Filmscreen front projection material is laminated to a rigid surface, allowing for a super-thin frame while still ensuring the screen remains flat.

Mix and match frame and material colors, to achieve the desired aesthetic. Color matched frame and screen material options provide a zero-edge appearance. Alternatively, an optional 1/2" Velux overscan border can be added to provide better system performance, while still rendering an elegant, minimalist aesthetic.

All this adds up to place Sabre amongst the lowest profile fixed frame front projection screens in existence, and the only such screen that is a Stewart Filmscreen.

FEATURES:

- For use with any of Stewart Filmscreen's award winning, front projection screen material
- Available in a variety of frame colors, custom aspect ratios, and sizes up to 60"x120"
- Stylish 1/4" beveled frame creates a sleek, edgeless appearance
- Ships fully assembled, providing ease of installation

Comes standard in choice of Matte Black or Brushed Pewter frame finishes. Many other finishes available upon request. Custom finishes may be subject to extended lead times. Contact your representative for more information.
