

Video Conference Screen (VCS)

A standard electric retractable system outfitted with customized housing that can hold a camera

Video Conference Screen (VCS)

Stewart Filmscreen's Video Conference Screen (VCS) is a standard electric retractable system outfitted with a customized housing that holds a camera. Positioned underneath the screen, the camera is less visible to conference participants, who might be uncomfortable with cameras that are in full view. Eliminating cameras on the wall creates a cleaner installation and an atmosphere of productivity and teamwork. One issue that many video conferencing setups have today is that the camera is often glaringly visible, which in addition to looking unattractive, makes people more self-aware and uncomfortable, which ultimately can lead to decreased productivity. At Stewart, we are committed to providing seamless solutions for business and videoconferencing applications.

The VCS is available with variety of Stewart's front projection materials. Our exclusive Tab-Guy™ tensioning system ensures a smooth and completely flat screen surface. Matte black over-scan borders* provide a perfectly masked image area. Microperf X2 is available when acoustic transparency is required.

Stewart Filmscreen is known for superior quality, custom craftsmanship and long, trouble-free product life. As every Stewart product is handcrafted, custom sizes and configurations are easily accommodated. Contact your local Stewart Representative today and let us build one for you!
